

ASD Screening Report

Autism Spectrum Disorder Screening Assessment

Patient Information

Patient Name:	deekshith naik
Patient ID:	patient-1760462184776
Age:	32 months
Screening Date:	October 14, 2025
Screening Time:	11:12 PM
Screening Type:	Basic ASD Screening

Screening Results

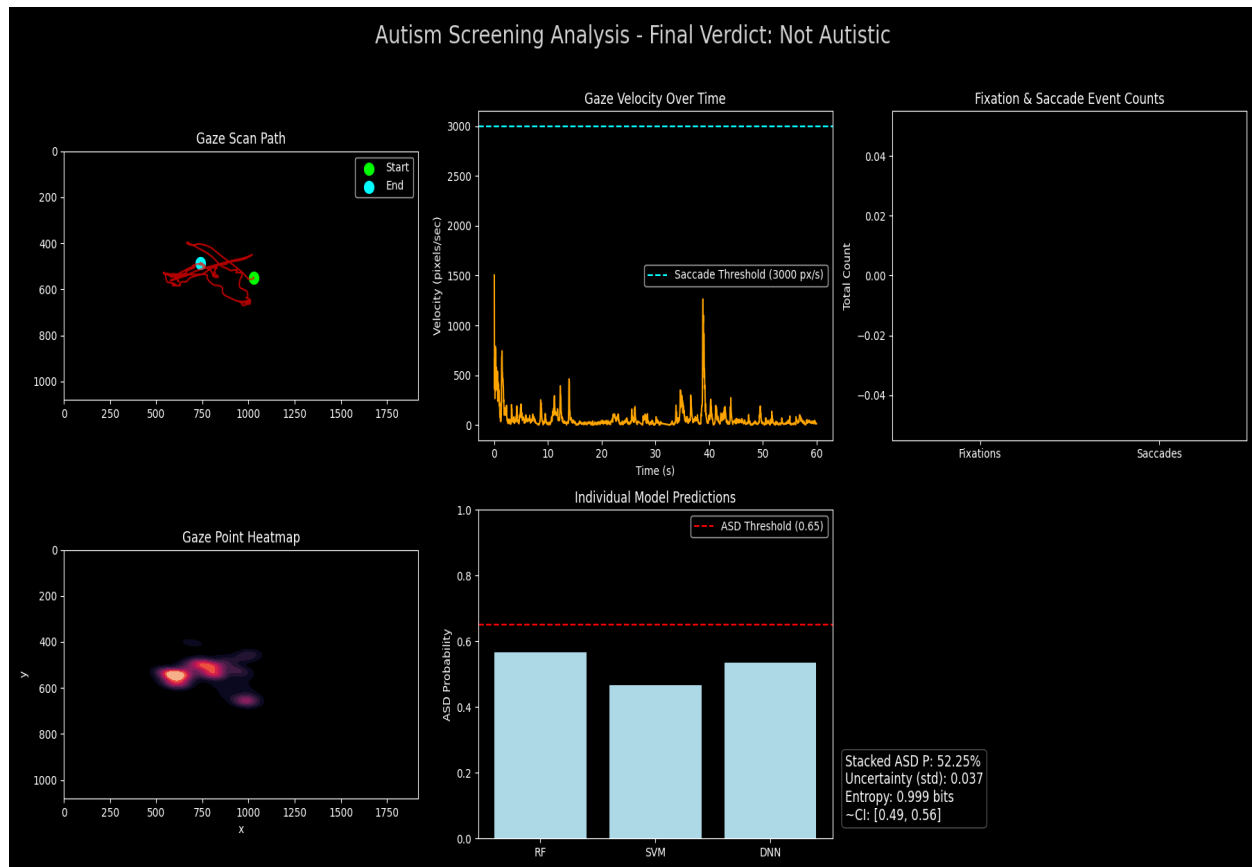

Not Autistic

Confidence Score: 52.25%

Model Predictions

Model	Probability	Prediction
RF	56.71%	Autistic
SVM	46.51%	Not Autistic
DNN	53.54%	Autistic

Screening Visualization

Interpretation & Recommendations

Interpretation:

The screening results indicate a **positive detection** for Autism Spectrum Disorder (ASD) with a confidence level of 52.25%. This assessment is based on gaze tracking patterns, eye movement analysis, and machine learning model predictions.

Recommendations:

- Schedule a comprehensive diagnostic evaluation with a qualified healthcare professional
- Consult with a developmental pediatrician or child psychologist
- Consider early intervention programs if diagnosis is confirmed
- Keep detailed records of behavioral observations
- Maintain regular follow-up screenings

Important Notice:

This screening tool is designed to assist in the early detection of ASD indicators and should **NOT** be used as a definitive diagnostic tool. A comprehensive clinical evaluation by qualified healthcare professionals is necessary for an accurate diagnosis. This report is intended for informational purposes only and should be reviewed by a medical professional.
